

Annual Production Sale
MONDAY - 1:00 PM MST
FEBRUARY 24, 2020

BEAVERHEAD LIVESTOCK AUCTION
DILLON, MONTANA

Offering

115 PAP TESTED YEARLING & LONG YEARLING BULLS
6 REGISTERED REPLACEMENT HEIFERS
110 COMMERCIAL REPLACEMENT HEIFERS

CIRCLELANGUS.COM

Our 13th Annual Production Sale will be held in Dillon, Montana on February 24, 2020. Our customers continue to be the driving force behind our business and we strive to produce fault-free, balanced trait cattle that will tip the scale come weaning time. We appreciate the confidence you have placed in our program.

Much like last year, we are off to a mild winter with eight inches of snow and calving is in full swing. While we love what we do, we are glad to see 2019 come to a close given the brutal winter and challenging market conditions. Surely we will not have two old fashioned Montana winters in a row and the projected upswing in the market is certainly welcome news!

We have just returned from the National Western Stock Show in Denver as we write this letter. There was talk about the PAP EPD data (updated) recently released by the American Angus Association (AAA). We are pleased to report that Circle L Gus has a PAP EPD of -1.63 which currently makes Gus the #2 PAP EPD Bull (among Active A.I. Sires) in the Angus Breed. It is important to note the breed average for PAP EPD is +1.00. Therefore, animals with values less than +1.00 are considered a "breed improver" for that trait meaning lower numbers are more desirable for that trait. Since the PAP EPD is in the early stages, we will continue to PAP Test and provide actual scores for our customers and also for submission to the AAA to assist in further development of this EPD. You will find more information on the topic in this catalog.

This year's offering includes 115 powerful bulls that have been Fertility, PAP & BVD tested. Also offered are 6 hand-picked registered replacement heifers. The registered heifers are right out of the heart of our program along with 110 fancy home-raised commercial replacements.

The cattle were raised in the Wise River high country ranging from 6,000-8,500 feet where they were PAP tested and developed at Hansen Feedlot, 5,050 feet (just north of Dillon). We weaned earlier (August) this year to ensure ample development time promoting even growth, soundness and longevity. We are very pleased with their performance and overall condition. The cattle are available for previewing at the feedlot (just past MM 6 on Hwy. 91 North) until Saturday, February 22nd and then at Beaverhead Livestock Auction thereafter.

We invite you to preview the cattle and enjoy a complimentary beef lunch beginning at 11:30 AM on Monday, February 24th. Please contact us if we can be of assistance. We look forward to seeing you at the sale.

Cory & Kari Lamey

Circle L Angus / 62211 Hwy 43 / Wise River, MT 59762

Once logged in, click the Submit button next to Beaverhead Livestock Auction to obtain pre-approval. Please pre-register 24 hours in advance of the sale. If you have questions, call Beaverhead Livestock Auction at 406-683-2002.

Annual Production Sale

MONDAY, FEBRUARY 24, 2020

**BEAVERHEAD LIVESTOCK AUCTION
DILLON, MONTANA**

Lunch 11:30 AM MST | Sale 1:00 PM MST

SALE DAY CONTACTS

Beaverhead Livestock Auction.....406-683-2002
Cory Lamey Cell.....406-491-7363
Kari Lamey Cell406-491-1800

SALE LOCATION

Beaverhead Livestock Auction is south of Dillon and east of Interstate 15. Take Exit 56 and head north or Exit 59 and head south.

AUCTIONEER

Joe Goggins.....406-861-5664

REPRESENTATIVES

Kurt Kangas, American Angus Association.....406-366-4190
John Goggins, Western Ag Reporter.....406-698-4159
Jeff Thomas, AgriMedia.....406-581-8859
Devin Murnin, Western Livestock Journal.....406-696-1502

INSPECTION Cattle may be inspected at Hansen Feedlot, Hwy 91 N (just past mile marker 6 on west side of Hwy) any time prior to the sale. They will be available for viewing at the sale site beginning Saturday, February 22, 2020.

WINTERING Free feed until April 1, 2020 and then \$3 per head per day thereafter.

DELIVERY Free delivery on bulls up to 750 miles and at cost thereafter. If you choose to haul your own bulls sale day, we will deduct \$100 per head.

BIDS/SIGHT UNSEEN GUARANTEE If you are unable to attend the sale, please call us, the Publication Representatives, or the Auctioneer, and we will assist you with your order and offer a sight unseen satisfaction guarantee.

SALE ORDER Commercial heifers sell first, followed by fall bulls in catalog order, then yearling bulls in catalog order, and registered heifers sell last.

ACCOMMODATIONS

Fairbridge Inn Express.....406-683-3636, ask for Circle L rate.

ANNOUNCEMENTS Check CircleLAngus.com for a supplement sheet with up-to-date information. All announcements made from the auction block take precedence over printed material in this sale book.

FIRST BREEDING SEASON GUARANTEE

All bulls selling for \$3,250 or more will be covered 50% by Circle L Angus if they are injured during their first breeding season. This guarantee does not include death as that can be insured for. Breeding season is defined as a 60-day period following the first turnout of bulls. Fifty percent of the value of the injured bull, minus one-half the salvage value, will be given credit in a future Circle L Angus sale or towards a replacement bull if one is available. Salvage value, if any, will be split equally between Circle L Angus and the buyer. All injured bulls must be diagnosed by a veterinarian. We also reserve the right to a second opinion by a veterinarian of our choice. Please notify us as soon as possible should injury occur and prior to the injured bull being sold for salvage. All claims must be made by September 1, 2020.

FERTILITY Joe Hartley, DVM performed a breeding soundness exam, semen test, scrotal measurement and BVD test on all bulls.

HERD HEALTH All bulls are guaranteed virgin bulls and were vaccinated with Ivermectin Injectable, Pyramid 5 Presponse, 7-way with Somubac, wart vaccine, Fusoguard, and Pour On. Bovi-Shield Gold 5 - January 2020.

PAP TEST All bulls in the offering have been PAP Tested by Tim Holt, DVM and Pap Testing expert. Circle L Angus spring bulls were born at 5860 feet and summer ranged from 6000-8500 feet from June to October. The fall bulls ranged at 6000 feet from April through October. All the bulls were PAP Tested in Wise River and the PAP scores are in this catalog. For more information or recommended scores specific to your operation, contact us or Dr. Tim Holt, DVM at 970-596-1470 or timholt@colostate.edu.

RETAINED INTEREST Circle L Angus is retaining one-third revenue sharing semen interest in any bull sold in this sale. Full possession and full salvage value sells on all bulls.

TERMS AND CONDITIONS This sale is being conducted under the suggested sale terms and conditions adopted by the American Angus Association.

GENOMIC ENHANCED EPDS

Sale bulls that have genomic enhanced EPDs through the GeneSeek test are noted by this logo.

EPDS AS OF JANUARY 24, 2020

Research Report: Selecting Against High Altitude Disease

On Jan. 13, 2020, the American Angus Association® and Angus Genetics, Inc. (AGI) released the second research report including research expected progeny differences (EPDs) for high altitude pulmonary arterial pressure (PAP). Breeders will find that several updates have taken place since the original release in February 2019, including more than double the amount records, the addition of weaning PAP records, as well as the fine-tuning of parameter estimates. As a result, breeders will see some movement in the PAP EPD due to these advancements. Bulls with progeny data will rank similarly to the previous research report.

The EPD predicts the genetic differences in PAP score with lower EPDs being more favorable. PAP is an indicator for animals with lower risk of developing high altitude disease (HAD), which in most cases results in congestive right heart failure. Researchers and veterinarians at Colorado State University (CSU) have been studying the disease and its onset for years and have developed PAP tests in order to select animals to avoid pulmonary hypertension. This disease, most commonly found in cattle living at elevations of 5,000 ft. or greater, is a result of cattle living in hypoxic environments challenging heart and lung function. Symptoms of the disease include lethargy, diarrhea, weakness, brisket edema and death.

While hard to quantify the economic deficit to the industry, it is known to be detrimental to high-altitude herds as onset can occur at any age, can be further exasperated by other events such as bovine respiratory disease (BRD), and in almost all cases is fatal to the animal. The PAP procedure is helping operations avoid the unfavorable onset of HAD by finding high-risk individuals earlier in life, not only to be removed from the herd and sent to lower altitudes, but also to select breeding animals for the next generation. In order to take high-altitude PAP measurements on individual groups, animals need to be living at elevations at 5,500 feet or higher for at least a 4-6 week period before scores are taken. This warm-up period allows for the cattle to adjust to the environmental settings, allowing accurate scoring.

Research in the area reports PAP score is a moderately heritable measurement. A collaboration with the Association, CSU and AGI laid the fundamental groundwork for a PAP genetic evaluation. A recent study investigated the relationships of scores taken at differing elevations. The study by Pauling et al. (2018) concluded a high positive correlation ($r=0.83$) between PAP measurements taken at high altitudes (5,250 ft. or greater) and moderate altitudes (4,000-5,250 ft.). This reveals PAP scores taken at moderate altitudes can be an informative indicator trait of measurements taken at higher altitudes.

For the Association's PAP genetic evaluation, measurements taken at 5,500 ft. or greater are considered high-altitude measurements; whereas, measurements taken from 4,000 to 5,500 ft. are considered moderate altitude. Heritability estimates were similar to those found in previous research with high altitude ($h^2=0.39$) having a larger heritability when compared to moderate altitude PAP scores ($h^2=0.20$). In addition, the correlation estimate between the two elevation groups remained relatively unchanged at 0.75. In addition, high-altitude weaning PAP scores are included in the Association's genetic evaluation to account for any pre-selection bias that may occur as a result of

Selection Tools for Pulmonary Arterial Pressure

January 13, 2020 Update

selection pressure at weaning time. Only weaning PAP scores taken at elevations greater than 5,500 ft. are included in the analysis. The heritability of high-elevation weaning PAP ($h^2=0.25$) is similar to that of moderate-elevation yearling PAP.

In total, 7,319 high-elevation yearling PAP scores and 2,792 moderate-elevation yearling PAP scores were used in this second research report. This was up from the 4,700 high-elevation and 1,500 moderate-elevation measures previously included. Additionally, 3,613 high-elevation weaning PAP measurements are now being utilized as an additional correlated trait, of those measurements nearly one-third of those animals record a high-elevation yearling PAP measurement later on in life. Both age and elevation were accounted for in the model as covariates and contemporary group was included in the model as a fixed effect. Contemporary group includes herd, sex, test date and elevation.

This research EPD intends to prompt discussion among high-altitude breeders and information sharing within the industry before a weekly production PAP EPD is released later this year. With this second release, only A.I. sires with accuracy values of greater than 0.40 are published this research report. EPDs in this report were predicted with the use of the Association's Single Step genomic evaluation; therefore, genotypes were used for the PAP evaluation to more precisely define relationships among pedigrees. Association members who have directly sent in data to the Association will receive research PAP EPDs on individual animals in their herds that have PAP scores submitted. If members have PAP data they would like to send into the Association to be used for future analysis, members are asked to log into their AAA Login account to submit these scores. It is the Association's hope to take the PAP genetic evaluation from a research to a production evaluation later this year. This means a weekly genetic evaluation predicting PAP EPDs on animals that have their own record, progeny records or their genotype included in the evaluation.

When evaluating these research EPDs it is important to remember, a lower PAP EPD predicts a sire should produce progeny with lower pulmonary arterial pressures, decreasing the risk of contracting HAD, which is desirable. It is also important to remember that a PAP EPD is not a replacement for taking scores on cattle living at elevation. An animal may have good genetics to pass onto the next generation, but due to a life event, BRD for instance, their respiratory system may be damaged, causing them to lack the viability to survive at high altitudes. Think of PAP in terms of scrotal size. Bulls may have the genetic potential to pass along larger scrotal size genetics, but scrotal (SC) EPDs are not a replacement for breeding soundness exams (BSE). Producers will not send a bull out without conducting a BSE, no matter how good his SC EPD is. The EPD can be valuable to select parents for the next generation with less risk. However, if a sire is to be taken to higher elevations to live, they should be tested themselves before doing so.

PAP EPD remains a tool to increase the environmental adaptability of cattle living at altitude. While research exists and is ongoing to understand the possible link between bovine congestive heart failure (BCHF) experienced at high altitude versus lower altitude, no definitive evidence of a direct link exist at this time. PAP EPD is not considered a solution to avoiding BCHF in the feedlot. For more information or questions on PAP EPD, please contact the Performance Programs Department at (816) 383-5100.

Pioneer in Pulmonary Arterial Pressure Research Recognized

Dr. Tim Holt recognized with the Tomhave Industry Achievement Award.

Congrats to Dr. Tim Holt, DVM on your Distinguished Service Award and hats off for his tireless efforts in continuing the development of Pulmonary Arterial Pressure (PAP) as well as working with the American Angus Association in developing the PAP EPD. He has been instrumental in keeping many high altitude operations in business.

Serving as a standard for researchers to follow, Tim Holt was named the recipient of the Tomhave Industry Achievement Award on Nov. 2 at the 2019 Angus Convention in Reno, Nevada.

The Tomhave Industry Achievement Award was created in partnership with Neogen Genesee, to recognize and celebrate those who have made an impact on the beef cattle industry. The award was created in honor of 21-year secretary of the American Angus Association® William H. Tomhave. Both an admired cattleman and longtime servant to the Angus breed, Tomhave helped rebuild confidence in the Association by overseeing a period in which registrations, transfers and membership grew at a historic pace.

Tim Holt, a veterinarian and associate professor at Colorado State University, is no stranger to the Angus breed. He has distinguished himself globally as a leader in research in the field of high-altitude tolerance testing. Holt is known around the world for his pioneering of the pulmonary arterial pressure (PAP) test.

“Without innovation, progress cannot be made, and it’s individuals like Dr. Holt who are leading the way in advancement,” said American Angus Association CEO Mark McCully. “The development of PAP testing is another great tool for members to utilize to help ensure they meet their production goals.”

Holt’s contributions in the field of combatting high altitude disease with the use of pulmonary arterial pressure measurements, or PAP testing, have significantly benefitted the breeders and ranchers who manage cattle in our nation’s high country.

The American Angus Association released the first research expected progeny difference (EPD) for PAP in early 2019. This milestone would not have been possible without Holt’s perseverance and ingenuity. This research EPD stems from collaborative efforts between Colorado State University, the American Angus Association and Angus Genetics Inc. This soon-to-be-released EPD is a first of its kind for any breed association and will help producers identify cattle less susceptible to high altitude disease.

“For the first time in my life, I don’t know what to say,” Holt said. “It’s overwhelming and astronomically humbling to be given an award for doing what you love to do and having a passion for what you do, especially when it’s given by people who I love to work with.”

For more information on the American Angus Association Tomhave Industry Achievement Award, visit angus.org.

Landmark was the leadoff and top selling bull of the 2019 Circle L sale. He was used by a number of leading seedstock operations throughout the West last spring and will see many progeny born in early 2020. The first calves at Musgrave Angus look outstanding!

Landmark was added to the BEEF-360 lineup due to his exceptional phenotype; being an extremely deep bodied, stout made, attractive bull standing on an impeccable foot.

With his outcross pedigree, great balance of calving ease and performance, and quiet nature, Landmark is a great choice for your breeding plans.

PAP score of 39.

Contact us today for semen on *Landmark* and other BEEF-360 Exclusive Sires.
